

INFORMATION SHEET

BALCONY SUN COVERS OF HDPE MATERIAL

We sew our balcony covers using a very strong HDPE material of 285g/m² grammage. Owing to this special fabric, the covers provide 95% shade and are available in gray and sandy colours. Owing to the neat finish, they can be installed on various balconies. They decorate the railings on which they are fitted, ensure discretion and a sense of privacy, give shade, and protect against wind and rain. They are valued for their functionality, aesthetic look, easy use and non-invasive installation, as well as adjustment to numerous railings.

Note! When choosing a product, please read the instructions for use.
